# 1 About Mooberry Book Manager

Mooberry Book Manager is an easy-to-use system for authors to add books to their Wordpress websites.

No coding is necessary to use Mooberry Book Manager. Adding books is as easy as filling out a form. Include as much or as little information as you want, including the book cover, links to purchase the book, reviews of the book, an excerpt, and more.

Mooberry Book Manager will create a page for each book, ensuring a consistent look on all of your pages.

Organize your book into grids with just a few clicks. Grids can include all of your books or a selection of books, and you choose how they are ordered. You can create multiple grids; for example, an "Available Now" page and a "Coming Soon" page. Grids update automatically when you edit or add books. Set it and forget it!

Feature books on your sidebar with four options:

- A random book
- The newest book
- A book that's coming soon
- A specific book

Mooberry Book Manager works with your chosen theme to provide a consistent look throughout your website.

## 1.1 Quick Start

After installing and activating Mooberry Book Manager, you'll now have a Books menu. Use that to add your books to your website.

In order for your books to appear on your website, you need to add a Book Grid and/or a Widget.

### **To Add a Book Grid:**

- Create a new Page or edit an existing one
- Scroll down to the Book Grid Settings section
- Choose the books, grouping, and sort order
- Save the page and view it. Click on any book cover to get details of the book

### **To Add a Widget:**

- Go to Appearance -> Widget
- Drag the Mooberry Book Manager Book Widget to the Widget Area of your choice
- Choose the book to display
- Save the widget and view your website. Click on the book cover to get the details of the book.

## **1.2 Requirements**

In order to use Mooberry Book Manager, the following are required:

- Wordpress.org installation (NOT wordpress.com)
- Wordpress version 3.8 or higher.
- Mooberry Book Manager has been tested up to Wordpress version 4.4.2
- Javascript

## **1.3 What's New in Version 3.0**

This sections quickly reviews the changes and new features in Mooberry Book Manager version 3.0 for those users already familiar with Mooberry Book Manager.

The later sections of this manual describes these features in more detail.

While there are several new features and improves you'll see in version 3.0, the biggest change has been under the hood. The way your book data has been saved has completely changed in version 3.0. So when you update to version 3.0, you'll see a notice about migrating your data. **This is important.** Mooberry Book Manager version 3.0 will not work properly until you have migrated your data. All you have to do is click the "Migrate Data" button and Mooberry Book Manager will take care of the rest. Once the data has been migrated, the notice will go away and Mooberry Book Manager version 3.0 will be ready to go!

If you experience any problems during the migration, **don't panic.** First, Mooberry Book Manager doesn't delete any data, so you have lost nothing. If there is an error, Mooberry Book Manager will tell you the exact error. Select the text of the error and paste it into an email to [bookmanager@mooberrydreams.com](mailto:bookmanager@mooberrydreams.com) along with your website URL and we'll help you out.

### 1.3.1 Book Grids

Changes to the way the Mooberry Book Manager stores your book data have allowed the Book Grids to become more complex. You can now group books by illustrator, cover artist, editor, and publisher in addition to the already existing choices. However, grouping by more than 5 levels in a single grid is not recommended because the page may time out.

There are also more book selection options for grids, including illustrators, cover artists, editors, and publishers.

See page 29 for more information about Book Grids.

The auto-generated Book Grids are now called Taxonomy Grids, and there have been several improvements with them:

- You can now choose what the url is on the Settings Page. See page 38 for more information.
- These are now more compatible with more themes. If you continue to have problems, please contact us.
- You can now set text to display above and below the grid. This text is customized for each term (ie genre, tag, etc.). This feature requires Wordpress 4.4 or higher.

See page 33 for more information.

Not actually a Book Grid, but new “pretty links” have been created. These are similar to the Taxonomy Grids, except they aren’t grids. They display each book’s complete page in a list. The links are:

- <http://www.yoursite.com/book/tag/{some-tag}>
- <Http://www.yoursite.com/book/genre/{some-genre}>
- <Http://www.yoursite.com/book/series/{some-series}>
- <Http://www.yoursite.com/book/illustrator/{some-illustrator}>
- [Http://www.yoursite.com/book/cover\\_artist/{some-cover-artist}](Http://www.yoursite.com/book/cover_artist/{some-cover-artist})
- <Http://www.yoursite.com/book/editor/{some-editor}>

### 1.3.2 Book Pages

There have been some interface updates to the Book Edit page. Some of the boxes have been re-arranged for better visibility and workflow, placing the more important/common information towards the top and the less common pieces towards the bottom. The boxes can still be re-arranged to your liking. You may not notice a re-arrangement in Version 3.0 because Wordpress has already saved your current arrangement. If you’d like to reset the arrangement of the boxes to the default, you can do that on the Book Page Settings page (see page 39).

The Editions & Formats box now defaults to closed. This data is something that will probably not be used by most authors, and it was very intimidating looking.

The elements that can have multiple items (Reviews, Editions & Formats, Retailer Links, and Download Links) can now be re-ordered. There are move up (up arrow) and move down (down arrow) buttons on each items.

On the Book Display page that your reader sees, there have been a few updates:

- “Published on” date now uses the format you have set in your Wordpress settings
- The 2nd set of Retailer/Download links at the bottom now only display if the excerpt is more than 1500 characters AND the excerpt is expanded
- All images now use the ALT attribute to provide written context for blind users. Mooberry Book Manager will use the ALT text you set for the image in your Media Library, or if one is not set, will create a default one (eg, Book Cover: {title of book} )

### 1.3.3 Settings

The Settings page has been expanded and re-organized.

Mooberry Book Manager’s Settings page is now it’s own menu in the Dashboard instead of a item in the Settings menu. What used to be tabs have now become individual pages in the Mooberry Book Manager Settings menu.

#### 1.3.3.1 General Settings

These settings apply to more than one part of Mooberry Book Manager. All of the settings on this page are new. See page 38 for more information.

**Show Placeholder Cover On** – this lets you choose what happens if you don’t set a cover to a book. You can choose to show a placeholder image on the book page or widgets, or choose to just leave the space blank if there is no cover.

**Placeholder Cover Image** – this is where you choose what image to use for the placeholder if a book doesn’t have a cover set. Mooberry Book Manager installs with a default placeholder cover image.

#### 1.3.3.2 Book Page Settings

These settings apply to the either the Book Page Edit screen or the Book Page Display that the reader sees. Most of the settings are the same that were on the general settings page in version 2, but there are a couple new ones. See 39 for more information.

**Reset Book Edit Page** – allows you to reset the arrangement of the boxes on the Book Page Edit screen to the default setting.

**Add to Goodreads Image** – if you need to restore or would like to change the Goodreads Image, you can do it here

### 1.3.3.3 Book Grid Settings

These settings apply to both Book Grids that you can create and 4.3 Taxonomy Book Grids.

New settings here are the **Taxonomy Book Grid URL Settings**. These settings allow you to choose the slug used in the URL for the Taxonomy Book Grids (the grids that are auto-generated for a single genre, series, etc.). For example, by default, Mooberry Book Manager will display a Book Grid of all books in the romance genre with the following URL:

`http://www.yourwebsite.com/genre/romance`

The settings in this section will allow you to change the “genre” in that URL. For example, if you change the setting to book-category, the new URL would be:

`http://www.yourwebsite.com/book-category/romance`

There is a list of reserved words in Wordpress that you may not use as part of your URL. You can see a list of these words by clicking the link on the Settings Page.

See page 41 for more information.

### 1.3.3.4 Publishers, Retailers, Formats, and Editions

These pages are exactly the same as they are in version 2, except they each have their own page now instead of being on tabs.

## 2 Getting Started with Mooberry

### Book Manager

#### 2.1 Installing Mooberry Book Manager

Mooberry Book Manager is available in the Wordpress plugin repository, which means installing it is easy.

1. From the Wordpress Admin Dashboard, in the Plugins menu, click Add New.
2. Search for Mooberry Book Manager.
3. Click Install Now.
4. Click Activate Plugin.

If you choose to install Mooberry Book Manager manually, you can download the zip file from <https://wordpress.org/plugins/mooberry-book-manager/> and install it with these steps:

1. Download the zip file. Do not extract it.
2. From the Wordpress Admin Dashboard, in the Plugins menu, click Add New.
3. At the top, right next to “Add Plugins” click Upload Plugin

# Mooberry Book Manager User Manual

4. Direct Wordpress to the zip file and upload it.

5. Once the plugin is installed, activate it.

# Mooberry Book Manager User Manual

Once Mooberry Book Manager is activated, you'll see a new item in the menu called Books. A few images will be uploaded as well, a new widget added, and a new menu item called Mooberry Book Manager Settings.

**The first thing to do with Mooberry Book Manager is to add a book. See Books on page 13.**

## 3 Books

Mooberry Book Manager revolves around the Books menu that was added to the admin menu in the left sidebar. It works very similarly to the way Posts and Pages work as far as adding books, deleting books, and editing books.

### 3.1 Adding Books

The first thing you'll want to do is add a book. Open the Books menu and click "Add New Book" just like you're adding a new Post or Page in Wordpress. You'll be brought to a screen that looks very similar to the edit Posts/Page screen but asking for book-specific information.

All data is **optional** except the Title, with the following exceptions:

- If you add a review, you must fill the Review Text and **at least** one other review field (Reviewer Name, Review URL, or Review Website)
- If you add a download link, you must fill in **both** the Format and the Link
- If you add a purchase link, you must fill in **both** the Retailer and the Link
- If you add an edition, you must fill in **at least** the format.
- If you fill in either width or height of an edition, you must fill in **both** width and height.

**NOTE:** The order of the sections may differ on your screen than these screenshots because Wordpress allows the user to move items.

# Mooberry Book Manager User Manual

- Title
  - The main title of your book
  - Do not include the subtitle here
  - This forms the book page's permalink, just like a blog post title
- Summary
  - This is the description of your book, usually the text you'd find on the back of a physical book or on a retailer's website such as Amazon.
  - You can use the toolbar to format this text the same way you would with a Post or a Page in Wordpress.

- Cover
  - You can select a file to be used as your book cover using the same process

# Mooberry Book Manager User Manual

as Wordpress's Media Library

- You can upload a file from your computer or choose one from your Media Library
- You can delete the cover image by clicking the red circle in the upper left corner of the image preview

- Excerpt
  - This is an excerpt from the text of your book.
  - You can use the toolbar to format this text the same way you would with a Post or a Page in Wordpress.

## Mooberry Book Manager User Manual

Book Details

Subtitle

Release Date

2014/01/14

yyyy/mm/dd

Publisher

Goodreads Link

https://www.goodreads.com/book/sh

http://www.goodreads.com/your/Unique/Text/

Series Order

1 (leave blank if not part of a series)

- Book Details
  - Everything in this section is optional.
  - Subtitle
    - If your book has a subtitle, enter it here
  - Publisher
    - Name of your book's publishing company
    - This list is populated from the Publishers Settings. See page 44
  - Release Date
    - The date your book was/will be published
    - Future dates are allowed. Book Manager automatically recognizes future release dates as books that are "coming soon"
    - Must be a valid date in the format **mm/dd/yyyy** or **yyyy/mm/dd**
    - Date can be typed in or selected from the calendar pop up
  - Goodreads Link
    - If your book is on Goodreads, you can add the link to it here
    - Must be a valid URL that starts with [www.goodreads.com](http://www.goodreads.com). The "http://" will be added if you don't include it.
  - Series Order
    - If your book is part of a series, this tells Mooberry Book Manager what order the books go in
    - Must be a number greater than or equal to 0
    - Can have a decimal (i.e. 2.5)
    - Leave this blank if your book is not part of a series

# Mooberry Book Manager User Manual

The screenshot displays three stacked panels for adding metadata to a book. Each panel has a title, an input field, an 'Add' button, a note about comma separation, a list of existing items, and a link to 'Choose from the most used' items.

- Genres:** Input field, 'Add' button, 'Separate genres with commas', 'Contemporary', 'New Adult', and 'Choose from the most used genres' link.
- Series:** Input field, 'Add' button, 'Separate series with commas', 'Back to Bad', and 'Choose from the most used series' link.
- Tags:** Input field, 'Add' button, 'Separate tags with commas', 'bad girl heroine', and 'Choose from the most used tags' link.

- Genres
  - Genres work the same way tags do in Posts and Pages
  - You can add multiple genres to each book
  - Multiple books can be in each genre
  - Genres are optional. A book does not have to belong to a genre.
  - New Genres can be added to Book Manager simply by adding them here on the book page, or you can use the Genres page (see Taxonomies on page 25.)
- Series
  - Series work the same way tags do in Posts and Pages
  - You can add multiple series to each book.
  - Multiple books can be in each series
  - Series are optional. A book does not have to belong to a series.
  - You don't need to create a "Standalone" series. Book Manager automatically detects books not assigned to a series as a "Standalone"
  - New Series can be added to Book Manager simply by adding them here on the book page, or you can use the Series page (see Taxonomies on page 25.)
- Tags
  - Tags work the same tags do in Posts and Pages

## Mooberry Book Manager User Manual

- You can add multiple tags to each book
- Multiple books can have the same tags
- Tags are optional.
- New Tags can be added to Book Manager simply by adding them here on the book page, or you can use the Tags page (see Taxonomies on page 25.)
- You could use tags to specify categories or characteristics of your book that aren't genres.
  - For example, “strong heroine”, “gay for you”, “friend to lovers”
  - You can also use tags for content warnings, such as “dubious consent”

The screenshot displays three vertically stacked sections for adding metadata to a book:

- Cover Artists:** Includes a text input field, an 'Add' button, the instruction 'Separate Cover Artists with commas', and a link 'Choose from the most used Cover Artists'.
- Illustrators:** Includes a text input field, an 'Add' button, the instruction 'Separate Illustrators with commas', and a link 'Choose from the most used Illustrators'.
- Editors:** Includes a text input field, an 'Add' button, the instruction 'Separate Editors with commas', and a link 'Choose from the most used Editors'.

- **Cover Artists**
  - Cover artists work the same way tags do in Posts and Pages
  - You can add multiple cover artists to each book
  - Multiple books can have the same cover artist
  - Cover artists are optional. A book does not have to have a cover artist.
  - New cover artists can be added to Book Manager simply by adding them here on the book page, or you can use the Cover Artists page (see Taxonomies on page 25.)
- **Illustrators**
  - Illustrators work the same way tags do in Posts and Pages
  - You can add multiple illustrators to each book.
  - Multiple books can have the same illustrator

## Mooberry Book Manager User Manual

- Illustrators are optional. A book does not have an illustrator.
- New illustrators can be added to Book Manager simply by adding them here on the book page, or you can use the Illustrators page (see Taxonomies on page 25.)
- Editors
  - Editors work the same tags do in Posts and Pages
  - You can add multiple editors to each book
  - Multiple books can have the same editor
  - Editors are optional.
  - New editors can be added to Book Manager simply by adding them here on the book page, or you can use the Editors page (see Taxonomies on page 25.)

The screenshot shows a web form titled "Reviews 2" with a close button (X) and a scroll arrow (▲). The form contains the following fields and elements:

- Reviewer Name:** A text input field containing "Amazon Customer".
- Review Link:** A text input field containing "http://www.amazon.com/Capricic http://www.someWebsite.com/".
- Review Website Name:** A text input field containing "Amazon".
- Review:** A large text area containing a sample review:

I did not see this short story coming, but it grabbed hold and kept me glued to the page for every delicious word. The story is fully realized and well plotted. The characters have depth and their motivations are ubiquitous. Every word, every sentence pulls back a new layer for the reader. It's not a long story so I won't go on and on about what a truly terrific piece of writing this is. I'll just say this: Dang, this girl's got skills.

For people interested in suspense, action, and a dash of erotica.
- Buttons:** "Add Review" (bottom left), "Remove Review" (bottom right), and up/down arrows (bottom left).

- Reviews
  - You can add multiple reviews for your book.
  - Reviews can be re-ordered using the up and down arrows.
  - For each review, you must provide the following information:

## Mooberry Book Manager User Manual

- The Review text itself.
- **One or more** of the other fields (Reviewer Name, Review URL, or Review Website)
  - Reviewer Name is the name or username of the person who reviewed your book
  - Review URL is the URL where the review can be found. Must be a valid URL. The “http://” will be added if you don’t include it.
  - Review Website is the name of the website the review is on (ie, Goodreads, Amazon, etc.)
- To add a new review, click on the Add Review button. (\* See Release Notes on page 51 about a known bug with adding reviews)
- To delete a review, click on the Remove Review button under the Review text box.
- You can click on the triangle in the gray box that says “Review 1”, “Review 2”, etc. to open and close the individual review.

The screenshot shows a window titled "Retailer Links" with a subtitle "Add links where readers can purchase your book". Inside the window, there is a list of retailer links. The first link is "Retailer Link 1", which is currently expanded to show a form. The form has two fields: "Retailer" with a dropdown menu set to "Amazon", and "Link" with a text input field containing "http://www.amazon.com/Capricic" and a placeholder "http://www.someWebsite.com/". Below the form are two small arrows (up and down) for re-ordering and a "Remove Retailer Link" button. At the bottom of the window is an "Add Retailer Link" button.

- **Retailer Links**
  - Retailer Links are used if you are selling your book online on your site or other sites.
  - Retailer Links can be re-ordered using the up and down arrows.
  - You can add multiple retailer links for your book. (one per retailer.) For each retailer link you add, you must provide the following information:
    - The Retailer (See Retailers Settings Page on page 46 to learn how to change the content of the Retailer list)
    - Link is the direct link for your book in the specified retailer. Must

## Mooberry Book Manager User Manual

be a valid URL The “http://” will be added if you don’t include it.

- To add a new retailer link, click on the Add Retail Link button. (\* See Release Notes on page 51 about a known bug with adding retail links)
- To delete a retailer link, click on the Remove Retailer Link button under the Retailer Link box.
- You can click on the triangle in the gray box that says “Retailer Link 1”, “Retailer Link 2”, etc. to open and close the individual retailer link.

Download Links

*If your book is available to download for free, add the links for each format.*

Unit

Suggested Retail Price

Currency

Edition Title  First Edition, Second Edition, etc.

- Editions
  - Editions let you input the data that is specific to each edition of your book (paperback, hardcover, epub, kindle, etc.)
  - Editions are optional. You don't have to list any.
  - The Editions section defaults to closed to keep the screen from being cluttered.
  - Editions can be re-ordered using the up and down arrows
  - The only field required in each Edition is the Format (unless you leave the entire Edition blank)
  - The following information can be set per Edition:
    - Formats
      - See Edition Formats Settings on page 45 to see how to change this list
    - ISBN/AIN

## Mooberry Book Manager User Manual

- Language
  - Language this Edition is written in or translated to
  - See General Settings on page 38 to see how to set the default selection in this list
- Number of Pages
  - The length of your book
  - Must be a number greater than or equal to 1
- Height and Width
  - Primarily used for physical editions (paperback, hardcover, etc.) not electronic (e-books, audiobooks, etc.)
  - If one is filled in, both must be.
- Unit
  - The unit the Height and Width are measured in.
  - See General Settings on page 38 to see how to set the default selection in this list
- Suggested Retail Price
  - Do not include currency symbol
- Currency
  - Used to determine the currency symbol to precede the Suggested Retail Price
  - See General Settings on page 38 to see how to set the default selection in this list
- Edition Title
  - Can be used to identify different Editions as necessary (i.e., First Edition, Second Edition, Movie Tie-In Edition, etc.)

After you're satisfied with your information, click "Publish" (or "Update" if you're editing not adding a new book).

Your Book Details Page will be live on your site immediately, and automatically added to any Book Grids or Widgets that apply to it. See page 29 for more about Book Grids and page 36

for more about Widgets.

If you aren't ready for your book to be live, you can save it as a draft by changing the Status, just like any other Wordpress post or page.

## 3.2 Editing Books

To edit any book, go to the All Books page, and click on a book's title or the "Edit" link under the title.

## 3.3 Deleting Books

To delete any book, click on the red "Trash" link under the title.

To delete multiple books, select them with the checkboxes on the left. Choose "Move to Trash" from the "Bulk Actions" list and click "Apply".

Deleted books are not gone forever. They are moved to the Trash instead. To see the books in the Trash, click on the "Trash" link. From here, books can be deleted permanently or restored by clicking the appropriate link under the book title. Books can be deleted permanently or restored in bulk by using the checkboxes on the left and the "Bulk Actions" list.

## 3.4 Viewing Books

Now that you've added books in the admin side of Wordpress, how do you view them on your website?

Until you've added a Book Grid or a Widget, you can only view a book by going to its Book Details Page directly. You can find the link for the Book Detail Page on the Edit/Add page. Right under the title, you'll see "Permalink" and a URL. That's the direct URL to your book. Copy and paste it into your browser's URL window and look at your pretty book page!

You can use that direct URL anywhere you want to link to your book. Or you can add your book to your site's menu through the Menu section in Wordpress, but the real magic comes in when you set up Book Grids and Widgets. (And multiple books too, of course!)

# Mooberry Book Manager User Manual

Mooberry Book Manager does all the work for you by creating a page with all the information you entered and arranging it into two columns. Any field that you didn't fill out will simply be skipped and the page layout will rearrange to accommodate.

Mooberry Book Manager produces a responsive layout, so your page will perform just as well on a mobile device.

An example of a Book Details Page:

Book Title

Subtitle

This is the summary or back cover copy of a sample book. If this was a real book, all the links on this page would work and go directly to the appropriate page. But there are just place holders on this page.

## 3.5 Taxonomies

Taxonomies are ways of grouping data. The taxonomies available in Mooberry Book Manager are:

- Genres
- Series
- Tags
- Editors
- Illustrators
- Cover Artists

Each book can have multiple genres, series, tags, editors, illustrators, and cover artists (or none at all). All of these work exactly the same way Wordpress tags do on blog posts.

Just like Wordpress tags, new genres, series, tags, editors, cover artists, and illustrators can be created on the Add/Edit Book page when they are added to the book, or you can explicitly set them up on a separate page. To access this page, click on the appropriate link in the Books menu.

### 3.5.1 Adding Taxonomies

This page works exactly the same as Wordpress tags, so if you're not sure about how it works, you can check the Wordpress documentation.

Here is the Genres Taxonomy page. The pages for series, tags, editors, illustrators, and cover artists works exactly the same way. On this page you can add a new genre by filling in the fields and pressing the Add New Genre button. Or you can edit an existing genre by selecting on from the list on the right.

The Description field is not used by Mooberry Book Manager, however your theme may or may not use it.

If you have Wordpress version 4.4 and above, you will see two fields on this page: **Book Grid Description** and **Book Grid Description (Bottom)**. These fields allow you to set text to display above and below the Taxonomy Book Grid for the selected item. Each item in the taxonomy can have its own Book Grid Description, so, for example, you can have different text for your Contemporary Genre Taxonomy Book Grid and Historical Genre Taxonomy Book Grid. For more information about Taxonomy Book Grids, see page 33.

# Mooberry Book Manager User Manual

## 3.5.2 Editing Taxonomies

This page works exactly the same as Wordpress tags, so if you're not sure about how it works, you can check the Wordpress documentation.

The Description field is not used by Mooberry Book Manager, however your theme may or may not use it.

If you have Wordpress version 4.4 and above, you will see two fields on this page: **Book Grid Description** and **Book Grid Description (Bottom)**. These fields allow you to set text to display above and below the Taxonomy Book Grid for the selected item. Each item in the taxonomy can have its own Book Grid Description, so, for example, you can have different text for your Contemporary Genre Taxonomy Book Grid and Historical Genre Taxonomy Book Grid. For more information about Taxonomy Book Grids, see page 33.

# Mooberry Book Manager User Manual

Screen Options ▾

## Edit Genre

**Name**  
contemporary  
The name is how it appears on your site.

**Slug**  
contemporary  
The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

**Description**  
  
The description is not prominent by default; however, some themes may show it.

**Book Grid Description**  
Add Media Visual Text  
Paragraph  
  
The Book Grid Description is displayed above the auto-generated grid for this page: <http://localhost/wordpress/genre/contemporary>

**Book Grid Description (Bottom)**  
Add Media Visual Text  
Paragraph  
  
The bottom Book Grid Description is displayed below the auto-generated grid for this page: <http://localhost/wordpress/genre/contemporary>

[Update](#)

## 4 Book Grids

### 4.1 About Book Grids

Book Grids make it easy to display multiple books on your page. There are several options for choosing which books to display in a grid and how to group and sort them.

Here are just three examples of how the books can be arranged:

1. Grouped by series

2. All books ordered by publication date

### 3. Only books in the Romance genre

## 4.2 Setting up a Book Grid

To set up a Book Grid, add a new page using the Pages menu (or edit an existing one), just like you normally would in Wordpress. Scroll down on the Add/Edit Page screen and you'll find the Book Grid Settings section. You can add a Book Grid to any page on your website!

# Mooberry Book Manager User Manual

Here's how to add a Book Grid:

1. Choose "Yes" for "Display Books on This Page?"

2. Next, choose which books you want to display in the Grid:

<b>Setting</b>	<b>Chooses these books to display in the Grid</b>
All	All the books you've saved into Mooberry Book Manager
All Published	All the books with a publication date of the current day or earlier
All Coming Soon	All the books with a publication date after the current day or with no publication date
Select Genres	All the book in the genre(s) you select
Select Series	All the books in the series (one or more) you select
Select Books	You select the specific book(s) to display
Select Tags	All the books in the tag(s) you select
Select Editors	All the books edited by the editor(s) you select

## Mooberry Book Manager User Manual

Select Illustrators	All the books illustrated by the illustrator(s) you select
Select Cover Artists	All the books with covers designed by the cover artist(s) you select
Select Publishers	All the books published by the publisher(s) you select

3. The books can be grouped into categories with a heading for each group:

<b>Setting</b>	<b>Heading</b>	<b>Books w/o Info in Field</b>
None	N/A	N/A
Genre	{name of genre} Genre	Uncategorized
Series	{name of series} Series	Standalones
Tag	{name of tag} Tag	Untagged
Editor	Editor: {name of editor}	No Editor Specified
Illustrator	Illustrator: {name of illustrator}	No Illustrator Specified
Cover Artist	Cover Artist: {name of cover artist}	No Cover Artist Specified
Publisher	Published by {name of publisher}	No Publisher Specified

4. If you choose something other than “None” or “Series”, you’ll be able to further group the books. You can add several groupings, however be aware that adding more than 5 levels can cause the web page to time out.

5. If you aren’t grouping by series, choose an order for the books. (Books grouped by series will be ordered by their Series Order.)

Setting	Sorts the books by
Publication Date (oldest first)	Order of publication, oldest to newest
Publication Date (newest first)	Order of publication, newest to oldest
Title (A-Z)	Alphabetical by title
Title (Z-A)	Reverse-alphabetical by title

6. Decide if you want to use the default book cover height. (See Book Grid Settings on page 41 to learn more about the default Book Grid settings.) If you don't want to use the default, set the height in pixels. The minimum is 50.

7. If you would like any content to display below the grid, enter it into the **Additional Content** field.

Save the Page as you normally would. If you have Wordpress set up to add new Pages to your menu automatically, you should be all set. Otherwise, you can link to your page however you normally do.

### 4.3 Taxonomy Book Grids

Taxonomy Book Grids are special Book Grids that Mooberry Book Manager automatically generates. You do not need to create a page for them.

Taxonomy Book Grids are Book Grids for a single, specific taxonomy item. For example, if one of your Genres is "Contemporary" then Mooberry Book Manager will automatically create a Taxonomy Book Grid for just the books in the Contemporary Genre. For more information about Taxonomies, see page 25.

Taxonomy Book Grids are always sorted by title, with the exception of series. Taxonomy Book Grids for a series are ordered by the series ordinal. If you need to

specify a different sort order, you will need to create a page and add a Book Grid to that page.

To access these Taxonomy Book Grids, you have to get the slug for the series, genre, tag, editor, illustrator, or cover artist. To find the slug, click on the Books menu and choose the corresponding page: Series, Genre, Tag, Editor, Illustrator, or Cover Artist. In the list, find the slug for the item you want in the list on the right. Here is an example of the Genre Taxonomy page:

The format for the URL for Taxonomy Book Grids is:

**<http://www.your-site.com/{taxonomy-url}/{slug}>**

Where **{slug}** is the specific item (ie, contemporary) in the list on the taxonomy page, and **{taxonomy-url}** is the value set on the Book Grids Settings Page.

By default, Mooberry Book Manager uses these values for the **{taxonomy-url}**:

- Tag: <http://www.your-site.com/book-tag/{slug}>
- Series: <http://www.your-site.com/series/{slug}>
- Genre: <http://www.your-site.com/genre/{slug}>
- Editor: <http://www.your-site.com/editor/{slug}>
- Illustrator: <http://www.your-site.com/illustrator/{slug}>

- Cover Artist: <http://www.your-site.com/cover-artist/{slug}>

So for example, if you had a “Contemporary” genre with a slug of “contemporary” and you haven’t changed Mooberry Book Manager’s default settings, the URL would be:

<http://www.your-site.com/genre/contemporary>

**NOTE:** There is one case where these special URLs will not work: if the Permalinks settings for your Wordpress site are set to “Default”. In this case, you will not be able to use the URLs as formatted above.

You should change your Permalinks setting if it is set to Default. This is a good practice not just for Mooberry Book Manager, but for Wordpress websites in general. When you use the Default setting the URLs use numbers to determine what page to display. This means that search engines like Google can’t use your URL to determine if your page should be returned as a result. In other words, setting your Permalinks setting to something other than Default will help search engines find your site. That’s a good thing!

## 5 Sidebar Widgets

### 5.1 Description of Widgets

Widgets are another way to display your books on your website. The Mooberry Book Manager Widget displays a single book cover and links to its Book Details Page. The book chosen is determined by the type of Widget you add.

There are four types of widgets:

- Random Book
  - Chooses a book at random every time the page is loaded
- Newest Book
  - Chooses the book with the latest publication date that is not later than the current day.
  - If more than one book meets that criteria, one of them is chosen randomly
- Future Book
  - Choose a book at random with a publication date after the current day or a blank publication date
- Specific Book
  - You choose a book from the drop down

### 5.2 Adding a Widget

To set up a Mooberry Book Manager Widget, drag the Mooberry Book Manager Widget into the sidebar area you want.

# Mooberry Book Manager User Manual

The settings:

1. Widget Title
  - Can be left blank
2. Which Book to Choose?
  - See the description of widget types in the previous section
  - If you chose "Specific Book", a new drop down appears so you can choose the book
3. Check whether the book title should be printed below the cover or not
4. Enter the width of the book cover image (in pixels)
  - Minimum allowed: 50

Multiple widgets can be added to the sidebar.

## 6 The Settings

Click on Mooberry Manager Settings to bring up the settings menu. There are seven sub-pages:

- 6.1 General Settings
- 6.2 Book Page
- 6.3 Book Grid
- 6.4 Publishers
- 6.6 Retailers
- 6.7 E-book Formats
- 6.5 Edition Formats

### 6.1 General Settings

The General Settings page is used to for settings that are used in multiple places in Mooberry Book Manager.

## Show Placeholder Cover On

Mooberry Book Manager uses a placeholder cover in places where a book does not have a book cover set. This option lets you turn the placeholder image on or off for Book Pages and Widgets.

## Placeholder Cover Image

This is where you can set the actual image used for the placeholder cover. Mooberry Book Manager comes pre-installed with a default placeholder cover.

## 6.2 Book Page

The Book Page Settings Page is used for settings that affect either the Book Edit or the Book Display pages.

The screenshot shows the 'Mooberry Book Manager Book Page Settings' interface. It is divided into two main sections: 'BOOK PAGE SETTINGS' and 'DEFAULT SETTINGS', both with purple headers. Under 'BOOK PAGE SETTINGS', there are three rows: 'Page Template' with a dropdown menu set to 'Default'; 'Add to Goodreads Image' with a 'Choose or Upload File' button and a preview of a 'goodreads' button; and 'Reset Book Edit Page' with a 'Reset' button. Below this section is a note: 'If you've reordered the boxes on the Book Edit page, this will revert them to their default positions.' The 'DEFAULT SETTINGS' section has three rows: 'Default Unit of Measurement' with a dropdown set to 'inches (in)'; 'Default Currency' with a dropdown set to 'U.S. Dollar'; and 'Default Language' with a dropdown set to 'English'. A blue 'Save' button is located at the bottom left of the settings area.

## BOOK PAGE SETTINGS

### Page Template

Mooberry Book Manager pulls the list of templates available in your theme so you can choose the one you want for your book page. Putting the setting here instead of on the Book Edit page keeps your book pages looking consistent, and means you only have to change one thing if you want to use a different template down the road.

### Add to Goodreads Image

Mooberry Book Manager comes pre-installed with an “Add to Goodreads” button. Here you can restore it or change it to a different image.

## DEFAULT SETTINGS

The settings here are used as the defaults in the Book Editions section of Books. If you only sell in one language/currency, you'll never have to change them after the defaults are set. The defaults are to save you time from having to make the same selections many times.

### 6.3 Book Grid

The Book Grid Settings Page is used for settings that affect Book Grids and Taxonomy Book Grids

**Mooberry Book Manager Book Grid Settings**

**GRID DEFAULT SETTINGS**  
This setting will be used on all grids that are auto-generated for a single genre, tag, etc. It's also used on any grids that do not override the default setting.

Default Cover Height (px)

**GRID TEMPLATE SETTINGS**  
This template will be used to display the grids that are auto-generated for a single genre, tag, etc.

Page Template

**GRID URL SETTINGS**  
These will be used to build website URL for the grids that are auto-generated for a single genre, tag, etc. Text entered in these fields will be converted to "friendly URLs" by making them lower-case, removing the spaces, etc.

**NOTE** Wordpress reserved terms are not allowed here. [See a list of reserved terms.](#)

Genre

Tag

Series

Editor

Illustrator

Cover Artist

## BOOK GRID DEFAULT SETTING

## Default Cover Height

You can set the height of book covers (in pixels) displayed in Book Grids here. For each individual Book Grid you add to your site, you can choose to use this default or override it.

Taxonomy Book Grids always use the default setting.

## TAXONOMY GRID TEMPLATE SETTING

### Page Template

Mooberry Book Manager pulls the list of templates available in your theme so you can choose the one you want for your Taxonomy Book Grid page.

## TAXONOMY BOOK GRID URL SETTINGS

Here you can change the URL used for the Taxonomy Book Grids. There is a list of Wordpress Reserved Terms that you cannot use as part of the URL. Mooberry Book Manager will not allow you to save the setting if you use a reserved term. The Wordpress Reserved Terms are:

attachment	perm
attachment_id	post
author	post__in
author_name	post__not_in
calendar	post_format
cat	post_mime_type
category	post_status
category__and	post_tag
category__in	post_type
category__not_in	posts

## Mooberry Book Manager User Manual

category_name	posts_per_archive_page
comments_per_page	posts_per_page
comments_popup	preview
customize_messenger_channel	robots

nonce	taxonomy
nopaging	tb
offset	term
order	terms
orderby	theme
p	title

page	type
page_id	w
paged	withcomments
pagename	withoutcomments
pb	Year

## 6.4 Publishers

The Publishers Settings Page is used to add Publishers that will display in the Book Edit Page.

- To add a new publisher, click on the Add New Publisher button. (\* See Release Notes on page 51 about a known bug with adding publishers)

- To delete a publisher, click on the Remove Publisher button in the Publisher box.
- You can click on the triangle in the gray box that says “Publisher 1”, “Publisher 2”, etc. To open and close the individual publisher.
- Publisher’s website must be a valid URL. The “http://” will be added if you don’t include it.
- The name is required. The website is optional.

## 6.5 Edition Formats

The Edition Settings Page is used to add formats to the Editions section of the Book Edit Page. Several common formats come pre-installed with Mooberry Book Manager.

The screenshot displays the 'Edition Settings' interface. It features two stacked panels, each representing a format. The top panel, titled 'Format 5', shows a text input field containing 'PDF' and a 'Remove Format' button. The bottom panel, titled 'Format 6', shows a text input field containing 'Audiobook' and a 'Remove Format' button. Below these panels, there is an 'Add New Format' button and a blue 'Save' button.

- To add a new format, click on the Add New Format button. (\* See Release Notes on page 51 about a known bug with adding formats)

- To delete a format, click on the Remove Format button in the box.
- You can click on the triangle in the gray box that says “Format 1”, “Format 2”, etc. to open and close the individual format.
- The Format Name is required.

## 6.6 Retailers

The Retailers Settings Page is used to add the retailers who sell your books. Several come pre-installed with Mooberry Book Manager, but you can add more if needed. The names on this tab will be used to populate the Retailers drop down list in the Retail Links section on the Edit Book Page. See Adding Books on page 13 for more information.

The screenshot shows a window titled "Retailer 15" with a close button (X) and a maximize button (triangle). Inside the window, there are two main sections:

- Retailer Name:** A text input field containing "Barnes and Noble Nook".
- Retailer Logo Image:** A text input field containing the URL "http://www.demo.mooberrydreams.com/wp-content" and an "Add or Upload File" button. Below the input field is a preview of the Nook logo, which consists of the word "nook" in green and blue lowercase letters, with a trademark symbol (TM) to the right, and "by Barnes & Noble" in blue text below it.

At the bottom of the window, there is a "Remove Retailer" button. Below the window, there is an "Add Retailer" button and a "Save" button.

- To add a new retailer, click on the Add Retailer button. (\* See Release Notes on page 51 about a known bug with adding retailers)
- To delete a retailer, click on the Remove Retailer button in the Retailer box.
- You can click on the triangle in the gray box that says “Retailer 1”, “Retailer 2”, etc. to open and close the individual retailer.
- The Retailer Name is required.
- The Logo Image is optional.
  - The Logo Image can be uploaded from your computer or you can choose an image already available in your Wordpress Media Library

- You can select a file using the same process as Wordpress’s Media Library

## 6.7 E-book Formats

The E-books Formats Settings Page is used if you offer your books for free download. Several formats come pre-installed with Mooberry Book Manager, but you can add more if needed. The names on this tab will be used to populate the Formats drop down list in the Download Links section on the Add/Edit Book page. See the Adding Books section on page 13 for more information.

- To add a new format, click on the Add Format button. (\* See Release Notes on page 51 about a known bug with adding formats)
- To delete a format, click on the Remove Format button in the Format box.
- You can click on the triangle in the gray box that says “Format 1”, “Format 2”, etc. to open and close the individual format.
- The Format Name is required.
- The Format Image is optional.
  - The Format Image can be uploaded from your computer or you can choose an image already available in your Wordpress Media Library
  - You can select a file using the same process as Wordpress’s Media Library

## 7 User Roles

### 7.1 Mooberry Book Manager User Roles

Mooberry Book Manager creates two new User Roles in Wordpress: Librarian and Master Librarian.

These User Roles allow you to add users to your Wordpress website that only have access to Mooberry Book Manager's Books. They will also have access to the Media Library, in order to upload covers for books.

The difference between the Librarian Role and the Master Librarian Role:

Librarians:

- Can add books
- Can view all books
- Can only edit or delete books they added

Master Librarians:

- Can do what Librians can
- Can edit or delete any book

To set up a user in the Librarian or Master Librarian role, use the Wordpress Dashboard Users page and select the desired role from the list. For more information about Users and User Roles, please consult the Wordpress documentation on the Users Screen and on Roles and Capabilities.

To allow users to have Librarian privileges as well as other Wordpress privileges, see the Standard Wordpress User Roles on page 49.

## 7.2 Standard Wordpress User Roles

Access to add, edit, and delete books with Mooberry Book Manager is granted through the standard Wordpress User Roles the same way blog posts are handled.

The standard Wordpress User Roles have the following capabilities concerning Mooberry Book Manager:

	<b>Subscriber</b>	<b>Contributor</b>	<b>Author</b>	<b>Editor</b>	<b>Administrator</b>
<b>Can add a book</b>		X  (submitted for review)	X	X	X
<b>Can view a book</b>	X	X	X	X	X
<b>Can edit own books</b>		X	X	X	X
<b>Can edit others' books</b>				X	X
<b>Can delete own books</b>		X	X	X	X
<b>Can delete others' books</b>				X	X
<b>Can approve Contributors' books</b>				X	X

For more information about Users and User Roles, please consult the Wordpress documentation on the Users Screen and on Roles and Capabilities.

## 8 Frequently Asked Questions

### 1. Will Mooberry Book Manager work with my theme?

Mooberry Book Manager has been designed to be theme-independent and should work for *most* themes. However, as there are infinite possibilities when developing themes and little required standardization, so some themes may not work as expected with the plugin. If Mooberry Book Manager isn't working for your theme, e-mail us at [bookmanager@mooberrydreams.com](mailto:bookmanager@mooberrydreams.com) and we'll see if we can help.

### 2. What's the difference between Download Links and Retailer Links?

Download Links should be used when you are allowing readers to download the book for free.

Retailer Links are used when you are linking to website for readers to purchase your book.

A single book most likely won't have both Download Links and Retailer Links, unless your book is listed for free at retailers and you are also allowing readers to download the ebooks directly from your website.

### 3. What link do I use for download links? How will my readers download the files?

Your ebook files will need to be uploaded somewhere. You have a few options:

1. Upload to a public storage website such as Dropbox.
2. Upload directly to your website via FTP.
3. Upload to your website via WordPress' Media Library. **Note:** WordPress does not allow you to upload .epub and .mobi files. You'll need to compress them into .zip files before uploading.

The link you enter on the book page should point directly to the file to download.

### 4. Can I use affiliate links?

Of course! Mooberry Book Manager doesn't change your link, so you can set your Retailer Links to use your Amazon, Barnes and Noble, or other affiliate code.

For the most up-to-date FAQ, visit <https://wordpress.org/plugins/mooberry-book-manager/faq/>.

## 9 Release Notes

### Version 3.0 (3/2016)

- Added: Book Grids can now be filtered and grouped by Editors, Illustrators, Cover Artists, and Publishers
- Added: Book Grids can now be grouped by several levels
- Added: Additional pretty links, eg /book/tag/{some-tag} which lists all matching books but display the full book page not a grid
- Added: Ability to update/change "Add to Goodreads" and "Coming Soon" book cover images (on settings page)
- Added: Custom text above and below auto-generated Book Grids (Wordpress 4.4+ only)
- Added: Tip Jar
- Added: Greek Translation
- Improved: Book Cover metabox moved above taxonomies, book info, and buy/download links metaboxes for greater visibility
- Improved: Book Pages and auto-generated Book Grids now created using a shortcode, which should allow them to play nicely with more themes
- Improved: Most book data is now stored in a custom table, allowing for faster and more complex grids
- Improved: URLs for auto-generated Book Grids can now be customized in settings
- Improved: Settings Page moved to main Admin menu for greater visibility and tabs are now sub-pages of the Settings menu
- Improved: New Page Settings sub-page to better categorize settings
- Improved: 2nd set of retailer/download links only displays if excerpt is more than 1500 characters AND excerpt is expanded
- Improved: User interface and instructions/descriptions of fields updated/added
- Improved: "Published on" date now uses the format set in Wordpress General settings
- Improved: Browser tab title is now the title of grid when viewing an auto-generated grid
- Improved: Accessibility improved by all images now using ALT tags set by user OR a default ALT tag in case the user has not set one.
- Improved: Reordered metaboxes on Book Edit page
- Improved: Added filter to move Yoast SEO metabox lower on the Edit Book page
- Improved: Formats & Editions box defaults to closed on Book Edit page. Entering all this info looks intimidating and probably 95% of authors don't

## Mooberry Book Manager User Manual

want/need this info on the website anyway.

- Improved: Added up/down buttons on repeated fields on Edit Book page to allow re-ordering (reviews, retailer links, download links, and editions)

### Version 2.4.2

- Fixed: Switched from site\_url to home\_url to create series grid link on book page (caused a problem when Wordpress is installed in a different directory than web URL)
- Improved: Reduced size of included images. Hopefully will help 500 errors on activation.

### Version 2.4.1

- Fixed: Error about non-object sometimes happening (grid styles)

### Version 2.4

- Added: South African Rand (ZAR/R) to currency dropdown options
- Added: Ability to update the user who created the book (may need to enable "author" in the Screen Options)
- Updated: Compliant with Wordpress 4.4 update

### Version 2.3

- New: Added Russian translation
- New: Added Italian translation
- New: Buy Links on the bottom of the book page are now hidden if the excerpt is collapsed
- New: Added Editors, Illustrators, and Cover Artists
- Fixed: Remove roles when uninstalled

### Version 2.2

- New: Added Spanish translation
- Fixed: Compliant with Wordpress 4.3 (and works for < Wordpress 4.3)
- Fixed: Retailer images missing since version 2.0 restored
- Fixed: Improved translation string for Series and Genre grids for more flexibility

### Version 2.1

- New: Book Grids are now responsive

## Mooberry Book Manager User Manual

- New: Added Serbo-Croatian translation
- New: Choose which theme template to use for your book pages
- Improved: Filter Book Grids by tag
- Improved: Group Book Grids by tag
- Changed: Book Grids cover height configurable, instead of number of book per row

### Version 2.0.1

- Fixed: Flushes rewrite rules

### Version 2.0 (7/52015)

- Added General Settings and Edition Formats
- Added Editions to book pages
- Redesigned layout of Book Page
- Blank data defaults and labels no longer display on Book Page
- Added Librarian and Master Librarian Roles
- Moved tags to new custom taxonomy instead of using post tags
- Added French translation
- Added comments support to Book Page

### Version 1.3.2

- Added 9 new retailers
- Escapes add\_query\_vars for safety

### Version 1.2

- Fixes bugs introduced in 1.1 (oops!)

### Version 1.1

- Added support for language translations
- Added German translation
- Fixed issues resulting from Customizr theme
- Fixed bug with book drop down in widget

### Version 1.0 (3/31/2015)

- Initial Release

**KNOWN ISSUES:** When adding a new Retailer, Format, Review, Link, or Edition, sometimes the fields pre-fill with data from the previous one. This can be over-written with the new item and saved without problem. This is a known bug and we're working on a fix.
